INTRODUCTION.

This second annual compilation of financial statistics of municipalities and counties, made under the act of 1911, is more complete than its predecessor, especially in the presentation of the county data. It is believed that the thoroughness with which information upon valuations, tax rates, receipts and expenditures have been provided leaves little room for criticism of the county statistics, which have before been collected and published in such detail. The municipal statistics are given in the same general form as before, though the arrangement is different, the cities now being classified according to population.

DILATORINESS IN REPORTING.

The report is issued at a date later than was intended, principally because a number of the municipalities were unreasonably dilatory in making their reports, and a few of the county reports also were longer than they should have been. On behalf of both the auditors and the city clerks and auditors it ought to be said that the report imposes on them a very considerable amount of labor, and have not been following forms of accounting corresponding to the classifications of this report. In the large majority of instances county and city officers have displayed an interest and a conscientiousness in rendering a ready obedience to the law, which only makes more apparent the failure of the minority to respond with ordinary promptness.

This difficulty in securing uniform reporting by the officers of governments is the same obstacle which has been encountered in the state where the same plan of collecting statistics has been attempted, and, judging from the printed reports of other leading states, it is not be entirely overcome until the state department responsible for the work sends its own agents into the field to perform, or at least to supervise, the work in every county and city. This is the practice followed by the Census Department of the United States Government in its collection of statistics of cities of more than 30,000 population, as well as its other statistical investigations. The smallness of the appropriation made to the Controller's office for this work—not very much more than the cost of printing—has rendered it out of the question to do field work, although visits were made to cities and towns in which a number of cities and towns from which reports would not otherwise have been obtained.

FORM OF THE REPORT.

The advantages and disadvantages of the particular form of report adopted by this department were discussed at the last annual meeting of the League of California Municipalities, resulting finally in the adoption of a resolution requesting that the Census Bureau be substituted for those heretofore used. This would be more convenient for the seven cities of more than 30,000 population, in which reports are compiled for the Census Department, and which are required to

work necessary to be done by the city clerks of the small cities and towns, and many of them, doubtless, would be unable to report at all in accordance with such a complicated schedule as that of the Census Bureau.

At the time when the action was taken by the League of Municipalities many of the reports for 1912 had already been rendered and it was obviously impossible to make a change in season for this report, but the reorganization of the report form for the following year will be given due consideration. At the same time the fact cannot be ignored that many of the smaller cities and towns have modified their accounting to make it correspond with the requirements of this report, and to introduce radical alterations in the report blanks would occasion them serious inconvenience as well as cause considerable expense. It is possible that before the Controller's blanks for next year are issued a way may be found so to harmonize the forms that the seven larger cities can report according to the census schedules, while the smaller cities can use simplified schedules, and yet report substantially the same reformation as the others.

REPORTS OF THE COUNTY AUDITORS.

Through the exchange of information with county auditors which this report has brought about it has been made very clear that a proper appreciation of the importance of the auditor's office is generally lacking. In most counties the auditor is one of the lowest-salaried of the county officials, and in the smaller counties, not to mention many of the larger ones, he is not given the assistance which is really necessary for the proper performance of his duties. In some cases where the sheriff of a small county is paid a salary of \$5,000, with fees added, and the assessor is compensated on a scale of equal liberality, the auditor is given a salary of not more than \$1,500 and is denied even a single deputy. Yet the auditor's office is of steadily growing importance, and his duties tend every year to become more onerous. These conditions become still worse, of course, when the auditor's office is combined with one or two others, as is sometimes done in small counties, and occasionally in larger ones. Suggestions have sometimes been made looking to special compensation by the State of the auditors, as well as of other county officers, for making reports which the laws require them to render, but this ought not to be necessary, and, moreover, it conflicts with the growing practice of providing in county government acts that county officers shall not retain for their own benefit any of the fees which the laws already give them. It is the duty of the people of each county to see to it that the auditor receives such support in the work of his office that he can comply with all of the requirements of the statutes and can furnish necessary statistical and other information.

GROWTH OF MUNICIPAL REVENUES, EXPENDITURES AND BOND DEBTS.

The most positive value possessed by statistical compilations like the present one is the means they furnish for measuring, and, if necessary, checking the growth of public expenditures, tax rates and bond debts, of which the tendency is always to go forward. The rate of increase may be either greater or less than the rate of increase in population and in wealth, and not until all of these comparisons have been fairly made can it be said whether or not the increase of public expenditures constitutes a dangerous extravagance.

There are two kinds of comparisons, both more or less profitable,

which may be made in an annual publication of municipal statistics: first, a comparison of the expenditures year by year of a city; and, secondly, a comparison of one city with other cities. true there are many necessary qualifications to be made in conclusions, and all of the statistics must be considered in connection with the general tendency of the times to demand more and our municipal governments, which, of course, can only come these demands by levying a heavier toll in the form of taxation.

GROWTH OF URBAN POPULATION.

In last year's report the 1910 census figures were taken for a comparison of cities and towns in 1911, and all per capita computations, receipts, expenditures and bond debts were based on them. But since a majority of the cities and larger towns are so fast, the census figures cannot any longer be fairly used in conclusions. The only other thing which could be done was to obtain estimates for 1912 population and use those numbers in figuring the per capita figures, although it was recognized that in the nature of things the estimates would be no better than rather crude approximations, and that they are cases exaggerations of the actual population. Nevertheless, a comparison of effort has been spent in trying to have the estimates made and it is believed that in a majority of instances the increase in population is reasonable, although others are unquestionably in excess of truth, and the total increase of city population shown, which is 350,000 for the two years, is probably 75,000 in excess of the actual numbers. Between 1900 and 1910 the urban population of the United States grew at the rate of 81 per cent, and a continuance of the same growth for the two years since the census of 1910 would increase of about 140,000 a year, or 280,000 for the two years.

The total estimated population of the 210 cities and towns in this report for 1912 is 2,003,424, as compared with a census of 1,624,125, not including an estimated population in several towns which were not incorporated at the time the census was taken.

The following figures show the estimated population for a comparison with the 1910 census population for the seven largest cities.

	1910.
San Francisco	416,971
Los Angeles	319,111
Oakland	156,111
Sacramento	44,611
San Diego	39,511
Berkeley	40,411
Pasadena	30,211

• Three additional cities, San Jose, Stockton and Fresno, claim to having a population of 30,000 or more, and these appear reasonable. San Jose, which had 28,946 inhabitants, furnishes an estimate of 33,500 for 1912. It should be expected that annexations play a considerable part in the population increase of several of these cities.

In all cases the estimates of population were made by city clerks, or, at least, were made in cooperation with the

ANNUAL REPORT OF FINANCIAL TRANSACTIONS.

8

ASSESSABLE WEALTH OF THE CITIES.

Comparison of assessed valuations shows that between 1911 and 1912 there has been a gain of about \$250,000,000 in assessable wealth, the aggregate of which for the 210 cities and towns included in the 1912 report is \$1,892,139,439. This is a slightly larger number of towns than was included in the 1911 report, but the towns which have been added to the table have such small valuation that for the purposes of this comparison they are negligible. As might be expected, a very large portion of the increase in assessed valuation is in the larger cities, the following being the figures for the fifteen largest:

Cities.	Assessed valuation in 1911.	Assessed valuation in 1912.
San Francisco	\$545,064,347	\$604,813,249
Los Angeles	374,604,160	458,939,129
Oakland	129,220,575	144,682,838
Sacramento	44,912,750	68,360,765
Berkeley	38,540,765	40,787,837
San Diego	46,222,084	51,620,718
Pasadena	46,854,500	52,107,635
Fresno	23,595,523	23,465,810
Alameda	14,562,845	17,204,883
Stockton	19,393,490	20,224,566
Long Beach	22,530,401	24,088,810
Riverside	23,407,518	23,811,388
San Bernardino	9,888,875	10,304,355
Bakersfield	5,595,778	5,839,709
	7,927,390	7,994,455
	\$1,352,929,951	\$1,554,091,222

In other words, of a total increase of \$250,000,000 in assessed valuations of cities made in one year, approximately \$200,000,000 was gained in these fifteen cities and only about \$50,000,000 in the other 195 municipalities.

These assessment figures cover both non-operative and operative property assessments. The non-operative amounts to \$1,647,116,236 and the operative to \$245,023,203. The fifteen largest cities, those named in the preceding table, account for \$225,128,206 of the operative property, leaving less than \$20,000,000 for all the other cities and towns.

MUNICIPAL GOVERNMENT RECEIPTS.

The total receipts of municipal governments from all sources for the last two years compare as follows:

	1911.	1912.
Property taxes	\$21,476,152 57	\$24,711,883 63
Licenses	3,757,972 77	3,797,185 78
Fees and fines	1,059,660 47	1,327,796 52
Franchises	170,761 35	308,859 86
Miscellaneous	2,827,563 87	2,317,788 16
Municipal industries	2,757,375 50	3,547,649 84
Sale of bonds	10,490,243 80	21,635,812 28
Special deposits	4,538,073 28	2,910,322 27
Total	\$46,777,803 61	\$60,557,300 34
Less bond sales	10,490,243 80	21,635,812 28
Total not including bond sales	\$36,287,559 81	\$38,921,488 06

This shows a substantial increase in every important department of the municipal revenues, the increase in receipts from taxes being approximately 15 per cent, and in receipts from municipal industries 25 per cent. The decrease in "special deposits" is not significant because such receipts can hardly be said to constitute revenue in any sense, and, moreover, by far the greater portion of the receipts so classified are reported by a single city, San Francisco. More thorough classification accounts for the smaller amount reported under "miscellaneous."

The large increase in receipts from bond sales, from \$10,490,000 \$21,635,000, is notable, but here again the greater part of the increase is confined to the larger cities. Los Angeles alone sold bonds to the extent of \$11,750,000, as against sales of less than half of that amount the year before. Forty-four cities in all out of the 210 report bond sales of greater or less amount; last year the number was 35.

COMPARISON OF DISBURSEMENTS.

Total disbursements for the two years compare as follows:

	1911.	1912.
For general government	\$4,415,145 86	\$6,054,511
For protection of life and property	6,483,321 08	8,076,96
For health conservation and sanitation	2,224,538 21	3,277,81
For education	2,597,866 86	2,666,10
For charities and corrections	941,632 36	833,54
For recreation (parks and playgrounds)	1,294,841 39	1,562,35
For streets (maintenance and lighting)	4,149,388 38	3,432,8
For public works (new construction)	8,316,657 02	9,707,5
For public industries and utilities	7,642,319 79	11,528,1
For bond industries and redemption	4,729,781 65	4,886,9
For miscellaneous (including refund of deposits)	1,013,472 53	1,224,1
	\$43,808,965 13	\$53,251,0

This increase of nearly nine and a half million dollars in a single year reflects, on the expenditure side, the more liberal supply of money. Los Angeles alone expended \$7,470,000 upon public industries and utilities and \$1,053,000 upon other public works, and San Francisco expended \$5,125,000 upon public works, most of these amounts doubt, being derived from bond funds.

Again, without an understanding of the peculiar double role of San Francisco plays, by being both a city and a county, a part of statistics would be unintelligible. In the municipal tables San Francisco is necessarily classed as a city, but a large portion of the expenditure is not properly city expenditures. Of a total of \$2,666,105.64 expended for education, according to the preceding table, no less than \$1,947,800 is credited to San Francisco, and this is a distinctively county expenditure. Again, of the \$833,000 expended for charities and corrections another county outlay, \$729,000 is credited to San Francisco.

But, with the exception of disbursements for street lighting maintenance, there is a general growth of expenditures all along the

BOND DEBTS AND BOND TAXES.

The aggregate bond debts reported for the two years compare as follows:

1912	\$83,297,510 96
1911	65,573,033 00

Increase ----- \$17,724,477 96

The increase or decrease of the debt of each of the seven larger cities is exhibited by these figures:

Cities.	Bond debt, 1911.	Bond debt, 1912.
San Francisco	\$18,301,069 00	\$22,179,300 00
Los Angeles	23,983,950 00	35,427,537 50
Oakland	4,907,350 00	4,781,990 00
Sacramento	1,030,500 00	1,036,000 00
Berkeley	345,790 00	333,337 50
San Diego	2,516,062 00	2,510,062 71
Pasadena	770,550 00	803,850 00
	\$51,865,271 00	\$67,072,077 71

In other words, of a total increase in bond debts of \$17,724,477.96, the seven largest cities account for \$15,206,806.71.

Tax rates for bond debt purposes have increased from .305 to .37 per \$100 in San Francisco, from .58 to .64 in Los Angeles, and from .48 to .58 in San Diego, but have decreased or remained stationary in the other cities of the first group.

The totals of bond debts given above include only the bonds actually outstanding at the date of this report. Several of the cities have voted larger amounts which are not yet issued and sold.

Of the 210 cities and towns only about 50 are entirely free from bond debts. Every city of more than 10,000 population has a bond indebtedness, with the single exception of Richmond. Of 64 towns or cities having less than 5,000 population but over 2,000, only seven are debt free.

STATISTICS OF MUNICIPAL INDUSTRIES.

The tables in which is presented the showing of results from operation of municipal water works, electric light and gas plants and public wharves contain nothing very different from the statistics of last year. There has been an increase from 54 to 62 in the number of water plants reported; the number of municipal electric light plants for which report is made is 15, the same as last year; Santa Clara is still the only municipality operating a gas plant, and seven municipalities report the operation of wharves, as compared with nine in 1911.

There has been a normal growth in the business done by both the water and the electric lighting plants. The total of ordinary receipts of the water plants (62 plants as compared with 54) has grown from \$2,142,777.36 to \$2,636,252.88, while the ordinary disbursements, including bond interest and redemption, but not new construction, and with no allowance made for depreciation, appear to have gone down from \$2,028,011.49 to \$1,546,899.39. This result is due almost entirely to a reported reduction in expenditures by Los Angeles, amounting to more than half a million. There has been a very large increase of construction expenses for both water and lighting plants. Los Angeles has

issued \$3,500,000 of bonds to meet the expense of installing a electric power plant in connection with the Owens River aqueduct. The ordinary receipts of the fifteen municipalities reporting lighting plants have increased from \$541,219.81 to \$604,185.59, the disbursements classed as ordinary expenditures have grown \$375,663.70 to \$536,571.96.

These statistics of municipal industries are still far from being complete as they should be or as it is hoped to make them. An attempt was made this year to ascertain the cost as well as the estimated of the water and lighting plants, but the data are very incomplete.

FINANCIAL STATISTICS OF THE COUNTIES.

Tables 12 to 16, both inclusive, in this report, are given up financial statistics of counties, which are presented in great detail owing to the meagerness of the report made last year it is not possible to make the same comparisons which have been made in the of the municipalities.

Including San Francisco, which in these tables appears as a county the total receipts and disbursements for the fiscal year ending June 1912, were as follows:

RECEIPTS.	
County revenues (fiscal year 1911-12) from general property tax	\$30,215
County receipts from licenses	15
County receipts from fees	14
County receipts from fines	2
County receipts from special services	10.4
District taxes collected	18
Miscellaneous receipts	1.8
Received from the state	6.3
Receipts from sales of bonds	12.6
Special receipts not available for county purposes	6.6
Total receipts by counties	\$71.5
DISBURSEMENTS.	
General government	\$6.6
Protection of life, health and property	4.2
Judicial expense	1.3
Public buildings (maintenance)	3.4
Education	19.4
Charities and corrections	3.1
Highways, bridges, ferries, etc. (maintenance and repairs)	8.1
Public works (construction)	11.1
Bond interest and redemption	3.7
Miscellaneous for county purposes	3.7
Amount paid state in settlements	2.1
Miscellaneous (not for county use)	2.1
Total disbursements	\$69.1

EXPANSION IN COUNTY FINANCIAL TRANSACTIONS.

There is a steady growth in county receipts and disbursements proceeds at a rate which approaches the rate of increase in revenues and expenditures. The total of county taxes charged the year 1912-13 (a year later than that covered by the details in the tables which follow) is \$34,678,183.84, which exceeds amount charged up in 1911-12 by nearly \$3,500,000. In the county of Los Angeles there was an increase of \$2,300,000, an to 40 per cent increase in one year, while in San Francisco the was at the rate of 13.28 per cent, and in the State as a whole the an increase of 11.20 per cent. In this connection the following from the regular biennial report of the State Controller is pertinent

"This rapid growth of county taxation is one of the most remarkable signs of the time. In 1907 the total of county taxes levied was \$22,145,000, and in 1912, five years later, it was, as before said, \$34,678,000. This was an increase of 56.59 per cent. In San Francisco alone the increase was 72.13 per cent, and in Los Angeles it was 82.68 per cent. These figures, when compared with those given in a former portion of this report, demonstrate that county taxes and expenditures have been growing more rapidly than even the state expenditures. Since the last year (1910) in which the State levied an *ad valorem* tax for general state purposes the aggregate of county taxes had grown to the extent of nearly \$7,000,000. How far, if at all, the adoption of a new system of state taxes has been responsible for an increase of local tax collections, it would not be easy to say, but the tendency in this direction was in full swing before the separation of state and local taxation. Between 1907 and 1908 county taxes showed an increase of more than \$2,000,000, and between 1909 and 1910 of approximately \$3,400,000."

For the fiscal year 1909-10 the reported disbursements of the county governments amount to \$63,912,580.61, while for the fiscal year 1911-12, as this report shows, they amounted to \$69,652,287.99.

There has also been an increase in the bonded debts of the counties, but the progress in this direction is not so marked as on the part of the cities. The bond debts of districts, principally school districts, amounts to \$18,993,281.31.

DETAIL OF COUNTY RECEIPTS AND EXPENDITURES.

Going more into the detail of both receipts and expenditures, there are many facts of interest which are brought out for the first time in connection with this report. For instance, under the heading of taxes collected, it appears that thirty out of the fifty-eight counties have either road poll, hospital poll or school taxes, or more than one of these classes of poll taxes, and that the revenue collected last year amounted to \$170,092.11. Again, of the total license collections, amounting to \$1,582,814.91, the liquor license receipts amounted to \$1,344,855.02.

County revenues from fees collected are almost as important as licenses, and of the fee-receiving officers the recorders lead, the receipts being two dollars to one for the clerks' offices.

The statistics of district taxes collected, which total \$10,429,448.50, would in themselves make an interesting study. They are classified according to purpose as follows:

Bond district taxes	\$2,775,272.82
School district taxes	3,793,248.85
High school district taxes	3,657,536.53
All others	203,340.30

Not far from one third of this great aggregate of district taxes, or, to be exact, \$3,157,622.41, is paid in the single county of Los Angeles, while Alameda County pays \$808,343.03, and San Francisco is entirely free from the burden of district taxes. Of the miscellaneous sources of income an important one has come to be interest on deposits of public funds, amounting to \$282,880.79 for the year. It is only a short time since the banks in which the county funds were placed either treated them as special deposits, not subject to use, or else used the money

without paying anything to the counties as compensation for the illegals they enjoyed.

The detail of disbursements shows that in the year 1911-12 the counties of holding elections was \$862,979.61. Of the principal county officers the cost of maintenance ranked in the following order:

Assessors	\$7
Sheriffs	6
Recorders	5
District attorneys	4
County clerks	4
Tax collectors	2
Auditors	2
Treasurers	1
Coroners	1

The greatest expenditures of the county governments are, of course, for education and for construction, repair and maintenance of public building expenditures also playing an important part. Including the funds received from state appropriations, and also paid by districts, the total educational expenditures by the counties for 1911-12, the largest items of expenditure being:

Elementary schools	\$13,
High schools	4,
Teachers' institutes and libraries	
Superintendents of schools	
Boards of education	
County libraries	

Although county libraries are a new development of the educational idea, no less than twenty-two counties report expenditures for this purpose.

In this report highway expenditures are divided into two classes, maintenance and construction, the following being the principal segregations:

Maintenance of roads, including oiling	\$3
Maintenance and operation of bridges	1
All other expenses of maintenance	1
Construction of roads	
Construction of bridges	

Total highway expense

The "other expenditures of maintenance" which appear in the figures consist mainly of expenditures for street maintenance in San Francisco, which are more properly a municipal and not a county charge.

Building expenditures are thus summed up:

Repairs and maintenance of public buildings	\$
Construction of public buildings	

Charities and corrections, another grand division of county expenditures, include the following sub-classifications:

Expenses of county jails	
County hospitals and juvenile detention homes	
Alms-houses and care of sick outside hospitals	
Care of indigents outside of county almshouses	
Care of orphans	
Care of inmates in reform schools	
Care of inmates in Sonoma Home (for epileptics and feeble-minded)	
Examination, etc., of insane	
Burial of soldiers and indigents	
All other expense	

Total

TOTAL OF TAXES LEVIED AND COLLECTED.

In a recent special report by the State Board of Equalization there was presented the following summary of general property taxes levied in California during the current fiscal year (or, in the case of municipalities, during the last year reported):

State taxes (Panama-Pacific).....	\$1,219,893 57
County taxes.....	34,676,537 55
Special school district taxes.....	5,737,365 41
Special high school taxes.....	4,745,906 89
Other special district taxes.....	359,424 30
Municipal taxes (excluding San Francisco, listed as a county).....	15,950,599 92

Total.....\$62,689,727 24

The foregoing is restricted to the returns from the general property tax; but to make the taxation statistics complete the following additions should be made:

State corporation taxes (levy of 1912-13).....	\$10,922,405 72
State taxes exclusive of state corporation taxes (collection of 1911-12).....	4,199,680 82
County license taxes (1911-12).....	1,582,414 91
County poll taxes (1911-12).....	170,092 11
Municipal license taxes.....	3,797,185 78

Total.....\$20,671,779 34

Add property taxes as above.....62,689,727 24

\$83,361,506 58

From which it appears that of \$114,540,295 of public money disbursed by all of our governments combined, \$83,361,506.58 is the product of taxation in some form, while \$31,178,789 constitutes receipts from sources other than taxation. In general terms it may be said that 70 per cent of all of the public money disbursed is raised by taxation and 50 per cent is raised by direct property taxes.

GRAND AGGREGATE OF EXPENDITURES.

An approximately accurate statement of the aggregate of public expenditures in California is as follows:

State expenditures (including payments to counties, except bond debt refunds and county reimbursement).....	\$17,910,652 28.
County expenditures (excluding San Francisco entirely and also excluding county receipts derived from the state).....	43,378,637 57
Municipal expenditures (including San Francisco).....	53,251,005 27

Total.....\$114,540,295 12

The above figures, when contrasted with those of former years, show a most extraordinary increase of public expenditures, or, as they might more properly be called, disbursements, as the following comparison will demonstrate:

1902. Estimate made by United States Census Bureau.....	\$45,161,865
1910. Controller's estimate.....	87,750,000
1911. Controller's estimate.....	94,627,910
1912. Present estimate.....	114,540,295
Rate of increase during ten-year period.....	153 per cent
Estimated rate of increase of population of state during same period (about).....	65 per cent.
