INTRODUCTION

The eighteenth Report of Financial Transactions of the Municipalities and Counties of California follows previous reports in form and classification. An endeavor was made to obtain data with which to prepare a cost of government table for both the counties and municipalities by eliminating trust and agency items and outlays from bond funds. Many of the cities and counties complied with our instructions, furnishing exactly the data requested, but those failing were sufficient in number to make a table of this nature incomplete and inaccurate.

There is no question as to the advisability of compiling a report based upon the cost of government. However, the experience of the past year indicates that it is impossible to secure proper data without field experts to gather the information and to assist the municipalities in standardizing their accounting along modern lines. Such a procedure would involve a considerable expenditure of money, and the funds of this department do not permit field work. The legislature might well consider the possibility of granting the additional authority under which this report is published to provide that the Controller be authorized to employ the necessary assistants, first—to make it possible to reflect the actual cost operations with respect to the municipalities and counties, and second—to be of real service in bringing order out of chaos in the accounting methods of many municipalities. The state would be rendering a splendid service to the taxpayers in making available accurate data regarding local expenditures which is not now possible.

1928	141,467,161 55	129,937,867 78	114,374,500 00

During the seventeen years reported by this table, the functions and powers of the state have increased enormously. Hardly a vocation, professional or otherwise, is now without the protection of state supervision, and each year the police power of the state is being constantly extended, creating new agencies of government.

The receipts since 1912 have increased 560 per cent, the payments 395 per cent and the bonded debt 1913 per cent. The chief items for which state bonds have been issued are highway and veterans' farm and home building. In 1928 the bonded debt increased 9.12 per cent over 1927, an increase entirely due to building and veterans' farm and home building bonds.

*COUNTY COMPARATIVE FIGURES

Since 1912 the receipts for counties have increased 526 per cent, the payments 566 per cent, the bonded debt 860 per cent and the nonopera-

tive property bearing the burden of this debt 204 per cent. The table follows:

*Excluding San Francisco city and county.

For the past several years there appears to be a constant ratio of twenty million dollars a year or more of increased bonded indebtedness. Since 1920, in applying this increase to assessed values, the bonded debt shows an increase of 6.75 per cent each year greater than that of assessed nonoperative property.

The amounts expended by the counties for recreation show a marked increase from year to year as may be indicated by the following figures:

1915	\$172,080 10
1920	216,579 47
1925	1,435,521 41
1928	1,840,840 10

While expenditures for educational purposes and highway development continue to receive a large percentage of the county finances the less serious phase of enjoyment and recreation is developing very rapidly. The state is easily accessible to tourists at all seasons of the year. The extensive highway system and moderate climate make either the coast or inland towns of California the logical resort for winter and summer vacations.

*MUNICIPAL COMPARATIVE FIGURES

The figures governing municipalities show no alarming increases nor unexpected decreases. The receipts have increased 283 per cent since 1912, the payments 331 per cent, the bonded debt 317 per cent and the nonoperative property 204 per cent.

*Including San Francisco city and county.

The bonded debt of the cities appears to be increasing at an average of about twenty-five million dollars a year since 1920, and this increase fails to take any recognition of the fact that old outstanding bond issues are annually decreasing on account of redemption. During 1928 the municipalities expended some twenty-eight million dollars for redemption and interest on old bond issues.

Attention should be again directed to the increasing tendency on the part of municipalities to issue bonds with the first date of redemption advanced to a date in the distant future. A check of the bond data in this office reveals that nearly 12 per cent of the large total above shown for 1928 municipal outstanding bonds covers issues of this nature. No doubt many, if not all, of these issues will outlive the improvements for which they were voted. The injustice of this procedure should be clearly apparent to every interested voter.

POPULATION

Particular study has been given this year to the table of population estimates. The changes in the ratio of assessed to true value of non-operative property as shown by the State Board of Equalization has been taken into consideration, as well as the increase of the non-operative rolls. In this manner several cities heretofore omitted in the estimate have this time been included, and though the value of these figures is confined to an estimate, they are as nearly accurate as a careful comparison of existing conditions can make them.

The population for 1910 was 2,377,549, and for 1920, 3,426,861. The estimated 1928 figure is 5,466,104, an increase of 67,647 over the estimate of 1927. The populations for the cities for which estimates have been made total 4,399,569, indicating that about 19 per cent of the state population is rural.

The value of this publication would be much greater if there was an accurate method of determining population figures at more frequent intervals than that provided by the federal census. The 1930 publication will contain a table indicating governmental costs upon a per capita basis for each municipality in the state. For the first time the taxpayer will have an opportunity to make an accurate comparison of municipal and county functional costs reduced to a per capita calculation. This department has made some preliminary computations upon the basis of estimated populations for the years since 1920 which indicate in a convincing fashion that certain functions in many municipalities are costing very much more than is warranted when compared with other municipalities in the same group. It would be unfair to the municipalities and counties to publish such a table upon estimates of population and for that reason we have not tabulated the results of the study that has been made along those lines.
