INTRODUCTION

Obviously, the purpose of a publication of this character is to present a picture of the financial status of government in our State and its political subdivisions, the cities and counties, for the consideration and analysis of governmental costs by those interested or involved in the operation of the functions of government.

The data contained herein relates to 285 cities, including the City and County of San Francisco, and 57 counties, for the Fiscal Year 1942-43. The one change in the number of reporting agencies is the addition of the City of Mendota in Fresno County, a sixth class city with estimated population of 1,200 persons.

Despite the amount of work involved and the time consumed in the compilation of a report such as this, there is perhaps some question as to its value in present form. While changes in customary and accepted procedure involving such a large number of reporting agencies can not be effected instantly, nevertheless the Controller will welcome the suggestions of those interested to the end that such a report may better serve the needs of the people of California and to better inform those interested in factual data pertaining to revenues, expenditures and taxation in general.

The Fifty-fifth Session of the California State Legislature (1943) amended Section 3714 of the Political Code (the Budget Act) and thereby charged the Controller with certain responsibilities pertaining to county budgets. To carry out the provisions of the act and the amendment thereto, the Controller has set up in his office the Division of County Budgets and Reports. Through this medium it is the Controller's intent and purpose to develop greater uniformity in budget procedure and in reporting financial transactions, and to eliminate as many of the complexities of both as are both possible and practical, commensurate with the requirements of law. The County Auditors' Association, the County Supervisors' Association and numerous interested taxpayer's groups have already pledged assistance in carrying out the program, which the Controller gratefully acknowledges.

The Controller also acknowledges with appreciation the splendid cooperation of city clerks and county auditors in providing the data necessary to produce this report relating to cities and counties and he is at the same time mindful of the increasing difficulties of those public servants under present conditions. The loss of experienced personnel in many of the offices and the vast amount of added work due to wartime Federal regulations has created many new and difficult problems that have not been easy of solution.

California today presents a vastly different picture than ever before in the history of the State, changes continuing with rapidity and completeness that leaves one in quandary over what is to come. Postwar planning, now in definite progress both as to projects and financing in almost every city and county, will no doubt supply the answers to many questions concerning the future, but great foresight and vision must be exercised by public officials charged with the responsibility of the planning program.

To illustrate let us briefly analyze the shift and change in California's population since the Federal census of 1940. That count gave California officially a population of 6,907,387—71 per cent of which was accounted for in urban communities and the remaining 29 per cent in rural California. While we have only estimates upon which to rely at this writing, we find the figures furnished by county auditors and city clerks in close agreement with many other interested agencies. As of June 30, 1943, the county auditors report California's population an estimated 8,015,720, an increase of 16 per cent. Of this estimated population 78.5 per cent has gone into the urban communities with a total as of that date (June 30, 1943) of 6,296,936 persons, while rural population decreased to an estimated 1,718,784 persons—21.5 per cent of the total.

This means so far as future planning is concerned, assuming that at least a relatively high percentage of the increase will remain in California after the war is won, that many housing projects must be included in postwar planning programs, particularly in urban areas; new industries to replace war industries must be brought in to provide employment; large scale food production development must be considered a vital factor in the health and welfare of the people. Furthermore, California must be ready to carry her full share of the rehabilitation of disabled veterans.

The readjustment period following the war will unquestionably put the responsible officials to the acid test, as will indeed the period between now and the close of the war. Careful and intelligent appraisal of probable needs, vision, foresight together with the application of a liberal dosage of common sense will carry California through the era of trial in satisfactory manner. The public servants of California are equal to the task, we are certain, and will measure up to and solve the problems before them.

Still another phase of the problem ahead is that of seeking out the solution for rebuilding the tax structure by way of compensating cities and counties for vast areas of land and properties which have been removed from local assessment rolls through acquisition by the Federal Government for war purposes.

The following totals for State, county and city governments from 1933 to date are provided to facilitate comparisons, and to show the trend of government financing in California.

*Excluding City and County of San Francisco.

During the current year county receipts have decreased nearly \$9,000,000 and payments \$19,000,000. The decrease in the receipts occurs mainly in the two chief sources of revenue—taxes and assessments, and, subventions and grants. The reduction in payments is shown principally under highways, charities and corrections, and education, with smaller decreases in recreation, interest payments and debt redemption.

The reports from the county auditors indicate that in every county the receipts during the year presented exceed the payments, with a result totaling about \$20,000,000. The purchase of investments should be included in the total payments, but some county officers have considered bonds as a cash equivalent, making no entry for their purchase. This fact might tend to reduce the cash balance.

**Including City and County of San Francisco.

In using the combined totals for the 285 cities, the picture may easily be confused by the inclusion of Los Angeles City and San Francisco. The reports for these two cities contain 64 per cent of the total receipts and 61 per cent of the total payments. Total receipts for all cities for 1943 exceed total payments by about \$40,000,000; nearly \$36,000,000 of this amount is accounted for by Los Angeles and San Francisco. While the total receipts and payments for 1943 exceed those for 1942, the general governmental receipts and payments are actually less. Receipts from public service enterprises have increased \$12,000,000 and trust receipts \$29,000,000; public service enterprise receipts for Los Angeles and San Francisco have increased \$6,600,000 and trust receipts \$28,600,000, the latter figure including \$22,775,000 received from the sale of Los Angeles electric plant refunding revenue bonds.

The city reports indicate that 83 cities, varying in size from over 75,000 in population to the very small communities, have payments in excess of receipts during the year presented. They have, however, invested large amounts of available funds in government bonds during the past year, and these purchases are responsible in almost every instance for payments exceeding receipts.

Both county and city assessed valuations continued to increase as will be noted in the foregoing tables. The cities show an increase in 1943 over the previous year of \$218,146,133, or 4 per cent, while the counties are not far behind with an increase of \$205,198,539, or 3 per cent. The increase while much greater than normal is occasioned by other than normal causes and is not necessarily the yardstick for future measurements of valuations. The shift of population to California from other parts of the Nation and that shift principally to California cities accounts for a definite part of the increase by assessable property brought into California from elsewhere. Expansion of industries, related in large measure to the war effort, accounts for its proportion of the increase, and strangely enough inventories of stocks on hand in both

wholesale and retail enterprises for 1943 were much larger than normally are carried.

As for the increase in valuation outside of cities, that is to say in the counties, a part of the increase is accounted for through higher values placed on agricultural lands and by industry expansion related to the war effort located outside of city limits. Some of this increase in valuation will, without doubt disappear, both inside and outside the cities, with the close of the war, but California obviously will benefit from whatever remains.

State and county bonded debt has steadily decreased since 1938, while the city total has increased solely because of the Los Angeles City issue of refunding revenue bonds for their electric light and power project.

Accounting procedure has been complicated this year by the withholding of income tax at source. For the purpose of this report, the Controller asked that departmental payments contain all salaries in full in order to reflect the actual cost of government. The amount withheld appears as a trust receipt, and the amount remitted to the Federal Government is shown as a trust payment.
